

DTF RGB: sRGB

COLOR REFERENCE INFORMATION:

The colors below are DTF spot colors that match as closely to stock screen printing colors as possible.

DTF printing is designed to cover the full RGB gamut in respect to color options. RGB has a much wider color spread than standard CMYK and it allows for much brighter prints.

To ensure the most accurate colors, all DTF artwork should be designed in the RGB workspace.

When exporting your design to PNG, make sure your color mode is set to sRGB IEC61966-2.1 AND make sure you export at 300 ppi or higher. This color profile matches our printers profile and color accuracy will be very dependable.
